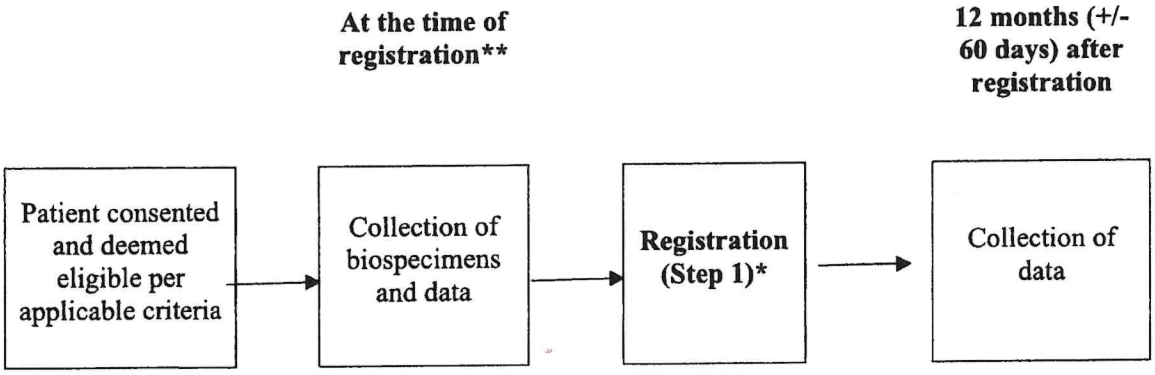
Schema



* Slot reservation required (see Section 4.3).

** For patients with a cancer diagnosis, biospecimens and data should be collected prior to any definitive therapy for the cancer.

Please refer to the full protocol text for a complete description of the eligibility criteria.

Patient enrollment will be facilitated using the Slot-Reservation System in conjunction with the Registration system in OPEN. **Prior to discussing protocol entry with the patient, all site staff must use the CTSU OPEN Slot Reservation System to ensure that a slot on the protocol is available to the patient.** Site staff should then discuss protocol entry with the patient and obtain informed consent. After informed consent is obtained, site staff may then reserve the slot and proceed to register the patient.

Due to slot and funding restrictions, if a slot is no longer available after a patient consents, the patient enrollment cannot be accommodated.

Registration must occur within 14 days of slot reservation. After 14 days, the slot will be released.

For patients with a high suspicion of a cancer diagnosis but for whom the diagnosis has not yet been confirmed: A slot must be reserved in order to register the patient. Central review by the Study Chair(s) of radiology reports and/or clinical documentation of a high suspicion of cancer should be done by email prior to registering the patient.

If the Group credited for enrollment is a non-Alliance Group, then other requirements from the credited Group may apply.
